

OPTICOM TECH

Industrial Video Specialists

**Opticom Tech's Industrial Video Solutions are ideal for
Aggregate Plants/Quarries and other dusty & heavy vibration areas**

ADDITIONAL BENEFITS OF ADDING A VISUAL SYSTEM:

- Operations of the quarry
- Reducing downtime
- Security of the site

The CC02 cameras are designed to work in areas with High Vibration and Dust. They are compact in size and can be mounted directly to the machinery if needed. The High Impact housing guarantees the longevity of the product in a rock crushing environment.

The efficiency of operation and productivity are at their best when the cameras are installed on site. Opticom Tech's Industrial Wireless solutions make installing a system at an existing location simple. These built-tough wireless components are proven to work at even the toughest aggregate sites.

Complete visual systems help operators view different areas from one main point. Downtime can be decreased by reviewing recorded video to see "what went wrong" during the process.
